

Project for Wind Park Plant for sale in Paracurú, Ceará, Brazil 4 MW

Description

Investment proposal for sale of a wind park project with nominal power of 4 MW. Calculations of the productivity power are done on basis of using highly effective 2 turbines of 2 MW each one. In case shown interest from potential investors for using more turbines, with other turbines types or capacity, the power generated should be recalculated. More details data and as well as feasibility study can be done under signing a preliminary agreement for purchase of the project or leaving a deposit. Plot with total area 10 hectares are suitable for installation of wind park. There's direct access through asphalt and agricultural roads to the terrain which in turn is free of buildings or any plants. Availability of 69/128 KV grid close to the terrain.

Documents and permissions:

1. Statement for grid connection from ANEEL /COELCE in a process of issuing (expected date of acquiring – July 30th 2009).
2. Permitted and reserved power for 10 MW in a process of issuing (expected date of issuing – September 30th 2009).
3. Ecological license: In the process of acquiring (expected date of acquiring September 5th 2009).

Price of the project is 840.000,00 dollars
